Proposed Amendment

1. A building panel configured to be a load-bearing wall panel of a self-supporting building structure, the building panel comprising:

(a) a curved central portion having a curved shape in cross section perpendicular to a longitudinal direction along a length of the building panel, the curved central portion having transverse corrugations therein;

(b) a pair of side wall portions extending from opposite ends of said curved central portion in cross section, said curved central portion being concave-shaped in cross section from a perspective between said side wall portions, wherein said sidewall portions comprise straight portions that extend tangentially in cross section from the concave-shaped curved central portion;

(c) a pair of complementary wing portions extending from said side wall portions, and

(d) wherein said building panel is curved in the longitudinal direction; and

(e) wherein said building panel is formed from sheet material and configured to mate with adjacent building panels so as to form a load-bearing wall of a self-supporting building structure.
